

When is a permanent marker not permanent?

FUNDERMAX®

When you write on Max Resistance²

The color through Max Resistance² work surface material from FunderMax, designed specifically for the lab industry, has an array of benefits, including (but not limited to): chemical & stain resistance; scratch & impact resistance; antibacterial; thermal shock resistant; highly durable; and very easy to clean.

- Write your notes on the work surface – then when the experiment is complete – simply wipe off!
- Students putting graffiti on the work surface? Not a problem – simply wipe off!

**We used Goof Off to clean the permanent marker on our 0085 white with white core material.*

Imagine the possibilities...
